

Abstract

*Sub*  
a1> The invention relates to a magneto-optical recording or reproducing device having an erasing facility for information or data recorded on a magneto-optical recording medium.

According to the invention, the erasing facility is formed by an erasing magnet having a field strength sufficient to initialize the magneto-optical recording medium without the assistance of a laser and/or an optical scanning device.

The field of application of the invention relates to magneto-optical recording or reproducing devices.
